

# Connect™ for Slack

Ensure Slack communications are captured and managed to meet your regulatory, privacy and risk management obligations

Slack helps employees work together more productively, creating millions of records daily that could expose your organization to legal, regulatory and data privacy risks. Because messages are rapidly exchanged in a real-time conversation, users are more likely to send messages without thinking about the impact they may have, leading to potential complaints of harassment, discrimination, and retaliation, exposure of sensitive information or other costly policy violations.

Archive360 provides a highly scalable and secure archiving and information management platform that centralizes the management of all types of structured and unstructured data – including messages, emails, and files – to meet today's regulatory, legal, and business intelligence requirements. Archive360 Connect™ for Slack automatically captures content directly from Slack in its native format and in full context so you can easily find relevant data in the event of an investigation, review Slack content like it appears in Slack and easily interpret conversations, protect the data against alteration, and produce audit logs to help legal teams maintain defensibility.

## Collaboration meets Compliance

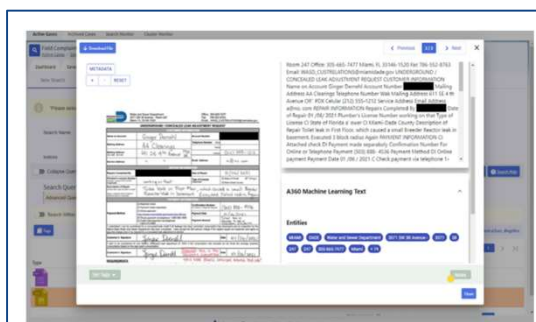

Ensure SEC, FINRA, MiFID II and other regulatory requirements are met easily and cost-effectively by automatically capturing, archiving, indexing, classifying and scanning Slack communications. Once in the Archive360 archive, content isn't flattened into an email format like in other archiving applications. All content is captured and retained in its native format, so you can quickly and easily review Slack content with our and/or leading e-Discovery solutions.

## Built for the Cloud

Archive360 is the first intelligent information management and archiving platform built for the Azure Cloud. This means that your sensitive Slack data, as well as all other archived data, always stays in your cloud under your direct control – encrypted with your keys. Unlike other vendors, Archive360 provides full data onboarding and cloud management of your Slack data, all in one solution. Why pay for and rely on a proprietary third-party cloud provider with confusing, questionable security controls and data processing restrictions?

## Intelligent Risk Mitigation

Archive360 captures multiple communication channels including email and is optimized for organizations with heavy collaboration workloads. When conversations happen across Slack, email, or other channels you can search and review the entire conversation within the Archive360 platform. All Slack content can be appropriately (based on content, context, ownership and geographic location) secured, archived, indexed, classified and scanned. Potentially sensitive data and PII can be identified, and reviewers are automatically alerted to policy violations.

Index and extract text content from images with OCR and automatically redact sensitive data.

## Automatically Archive and Manage Slack Conversations and Content

### Communication Types

- Workspaces
- Channels (Group, Private)
- Direct Messages (Group, Private — Internal & External)
  - One-to-One
  - Multiparty

### Message Attachments and Actions

- Images
- Audio & video recordings
- Links
- Message edits
- Message deletions
- Reactions
- Emojis
- Mentions
- Shared files

### Sample Customer

- 50,000+ Users
- 2+ million chats / day
- Locations across the world
- In-country data residency requirements

## Unmatched Slack Content Protection

- Zero-Trust security model – It's your data, in your cloud, under your control – unlike SaaS solutions, you have complete control over infrastructure and information security protocols.
- Secure attribute- and role-based access control with all activities recorded in a complete chain of custody.
- Our optional Security Gateway enables you to:
  - Encrypt your data on-premises before moving it to the cloud.
  - Store / manage your encryption keys on-premises – apart from your data stored in the cloud.
  - Use unique encryption keys and data classification to apply fine-grained access control to specific sensitive words or characters sets within a file as well as the file's metadata through masking, anonymization, or redaction.
  - Even system administrators can't access the data without explicit approval

## Compliance Archiving & The Power of PaaS

- Zero vendor lock-in! Your Slack data is stored in your cloud tenancy, in its native format.
- Define policies to automatically manage Slack message retention and disposition and enforce legal holds.
- Appropriately archive Slack communications to meet in-country data residency and disposition requirements.
- Unmatched ability to quickly process large volumes of data (PBs) – no matter how many users or workloads.
- Control storage and processing costs via scalability on demand – use (and pay for) only what you need.
- Protect Slack messages from alteration with WORM/SEC compliant immutable storage.

## About Archive360

Archive360 is the enterprise information archiving company that businesses and government agencies worldwide trust to securely migrate their digital data to the cloud, and responsibly manage it for today's regulatory, legal and business intelligence obligations. This is accomplished by applying context around the search, classification, security, retention, disposition and indexing of data including files, videos, and emails—all while allowing organizations to maintain full control over privacy, access, and compliance. Archive360 is a global organization that delivers its solutions both directly and through a worldwide network of partners. Archive360 is a Microsoft Cloud Solution Provider, and the Archive2Azure™ solution is Microsoft Azure Certified. To learn more, visit [www.archive360.com](http://www.archive360.com).

## Know Your Slack Content

- Optionally index and extract text content from PDFs and images with Optical Character Recognition (OCR)
- Optionally detect objects within an image or video
- Instantly transcribe audio and video content with speech-to-text capabilities
- Instantly translate text across more than 100 languages

## Monitor Slack Content

- Intelligent, AI-powered support of your FINRA Rule 3110 and NYSE Rule 342 supervisory review requirements as well as data privacy requirements.
- Automatically alert reviewers if policy violations are detected

## Easily Find What You Need

- Search, visualize and analyze petabytes of structured and unstructured data.
- Keyword-based searching across all content and related properties using exact, partial, and wildcard matching.
- One search across content from multiple repositories produces a single integrated set of search results.
- Machine learning and analytics work behind the scenes to produce search results that are not just relevant to the search term but are relevant to the user, based on role, location, search history and other factors.
