

Microsoft Teams Archiving

Compliant, secure, holistic retention and management of employee communication for regulatory and policy needs

Adoption of collaboration platforms, such as Microsoft Teams, is escalating. Organizations are urgently trying to support work from home orders. Products like Office 365 and Microsoft Teams are helping remote workforces stay connected and productive. However, they also present challenges to organizations' regulatory, privacy and risk management obligations.

Archive360 ensures that organizations can comply with their regulatory obligations, address privacy concerns and mitigate risk. Archive360 for Journaling directly supports compliant, intelligent and holistic archiving and management of Microsoft Teams. Implemented by some of the most highly regulated organizations worldwide, Archive360 directly addresses the needs of IT, Security, Legal and Compliance teams.

Collaboration meets Compliance

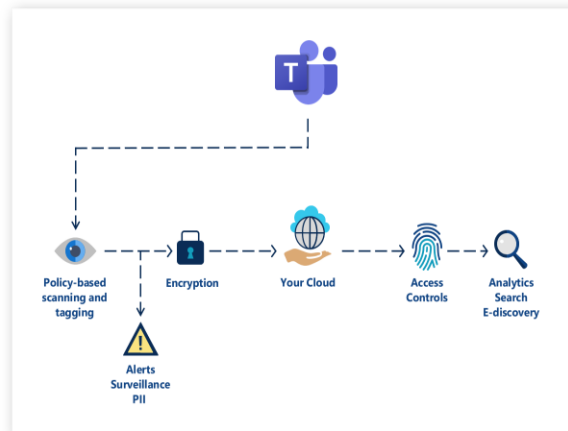

Support growing requirements for your global remote workforce while addressing your SEC, FINRA, MiFID II and other regulatory requirements. Archive360 is optimized for organizations with heavy collaboration workloads. Full native content support ensures compliant capture, management and archiving of all Teams conversations, with complete chain of custody.

Built for the Cloud

Archive360 is the first intelligent information management and archiving platform built for the Azure Cloud. This means that your sensitive Teams data, as well as all other archived data, always stays in your Microsoft Cloud under your direct control – encrypted with your keys. Unlike other vendors, Archive360 provides full data migration and cloud management of your Teams data, all in one solution. No paying for and relying on a proprietary third-party cloud provider with confusing, questionable security controls.

Intelligent Risk Mitigation

All Teams conversations and associated files and content are scanned and classified before archival. Potentially sensitive data and PII is identified and reviewers are automatically alerted to policy violations. All Teams data is appropriately (based on content, context, ownership and geographic location) secured, archived, and searchable.

Holistically Archive and Manage All Teams Conversations and Content

- Channels
- Communications in a Private Channel
- Direct messages
- Edits to messages (captured as separate messages)
- Group messages
- Files shared in communications
- Files not sent in a communication
- Deletions
- Integrated apps (wikis, etc.)
- Video
- Voice

Military-Grade Security and Access Control

- Content and context-aware Security Gateway encryption (in transit/at rest) delivers the highest levels of data security and automatically supports your data classification, taxonomy and data management requirements.
- Encryption and key-management delivered on-premises and in the cloud address the most stringent data privacy and protection requirements.
- Customer-controlled and customer-managed encryption keys further protect your data and ensure no vendor lock-in.
- Secure and audited data access and role-based access control.

Compliance Archiving & The Power of PaaS

- Zero vendor lock-in! Ensure you always retain control and ownership of your data. Unlike SaaS-based solutions, all data is stored in your tenant in your private cloud.
- All Teams conversations (one-to-one, group and channel communications, as well as files and content), are appropriately archived to meet in-country data residency and disposition requirements.
- Control costs via scalability on demand – use (and pay for) only what you need.
- Full support for policy-driven tiered storage and WORM/SEC compliant immutable storage.

About Archive360

Archive360 is the enterprise information archiving company that businesses and government agencies worldwide trust to securely migrate their digital data to the cloud, and responsibly manage it for today's regulatory, legal and business intelligence obligations. This is accomplished by applying context around the search, classification, and indexing of data including files, videos, and emails - all while allowing organizations to maintain full control over privacy, access, and compliance. Archive360 is a global organization that delivers its solutions both directly and through a worldwide network of partners. Archive360 is a Microsoft Cloud Solution Provider, and the Archive2Azure™ solution is Microsoft Azure Certified. To learn more, visit www.archive360.com.

AI-Powered Content Scanning and Tagging

- Leverage the power of integrated Artificial Intelligence with predictive scanning classification and tagging of your content BEFORE archival.
- Content-aware protection of sensitive data actively managed through both content and context inspection.
- Ensure compliance with external privacy regulations (i.e. GDPR, CCPA, HIPAA, PCI-DSS) as well as internal policies.

AI-Powered Content Alerts & Surveillance

- Intelligent, AI-powered support of your FINRA Rule 3110 and NYSE Rule 342 supervisory review requirements.
- Automated alerts if policy violations detected.

AI-Powered Analytics, Search, e-Discovery

- On-demand data analytics and intelligent search to help with cost control.
- Identify and investigate data trends, expose risks, mitigate fraud and liability.
- Meet complex eDiscovery and legal hold/case management requirements
