

Is Your Data Compliance Built to Withstand Scrutiny?

Being confident in compliance is different than proving it.

Audit Requests

Legal Holds

Data Access Demands

WHERE COMPLIANCE BREAKS DOWN

Data spread across systems

Information lives in silos, creating gaps and complexity.

Inconsistent retention

Policies aren't applied consistently across all data.

Slow or incomplete search

Finding the right data quickly takes too long—isn't possible.

No selective deletion

Inability to remove data creates privacy and legal risk.

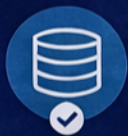

Reliance on backup systems

Backups weren't built for long-term retention or compliance.

Gaps surface when **speed** and **precision** are required.

WHAT STRONG COMPLIANCE REQUIRES

Capture data across all channels

Ingest data from all sources.

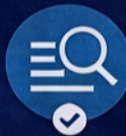

Enforce retention consistently

Preserve and maintain data automatically.

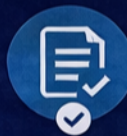

Apply legal holds

Preserve what's matters.

Enable fast, precise search

Find any data in seconds.

Support defensible deletion

Remove data correctly, and compliantly.

Maintain full auditability

Always be ready.

If these are missing, compliance is exposed.

A BETTER APPROACH

Centralize Data

Bring enterprise data to one governed archive.

Automate Policy Enforcement

Apply retention, legal holds, and deletion rules automatically.

Ensure Governed Access

Deliver secure compliant access, across the enterprise.

When compliance counts most,
will you be ready?
