

## Archive2Anywhere Editions

- Symantec Enterprise Vault
- Symantec Enterprise Vault.Cloud
- Autonomy EAS
- EMC SourceOne
- EMC EmailXtender
- Mimosa NearPoint

## Archive2Anywhere Benefits

- Fast deployment
- Full data fidelity migration
- Industry leading performance
- Legal and eDiscovery compliance
- Safely decommission legacy archive

## Gmail and Google Vault Migration Benefits

- Supports ingestion by leading 3<sup>rd</sup>-party archives
- Message conversion with full data fidelity
- Accelerates migration to Gmail
- Accelerates termination of legacy archive – cost savings

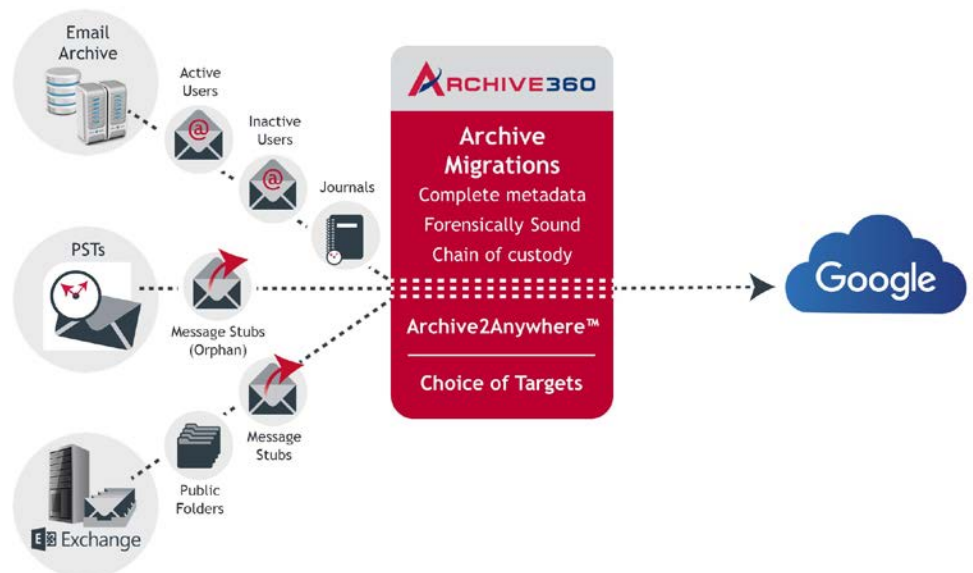

## Take advantage of Gmail and Google Vault Archive

Your organization is moving from on-premise Microsoft Exchange to the cloud-based Google Gmail enterprise email platform. Previously you relied on a third party archiving solution to manage the size of your mailbox, for compliance or to support your litigation and eDiscovery needs. You have terabytes of email archive data stored in your archive and much of your users' mail has been stubbed or shortcut. In addition, as Gmail uses EML formatted email, the Exchange MSG formatted archived email must be converted to EML. Your migration plan includes decommissioning your legacy email archive and migrating your archived mail to Gmail and Google Vault.

## Introducing Archive2Anywhere™

Archive2Anywhere™ is the only email archive migration solution designed specifically to work with Google Gmail and the Google Vault cloud-based archive. Archive2Anywhere migrates legacy email archive data directly into Gmail and Google Vault with complete, original message fidelity.

- Extraction of raw messages and attachments including all metadata.
- Following MSG to EML conversion, messages are processed directly into Gmail and Google Vault with 99.99% accuracy.
- Preserves complete, original message fidelity for eDiscovery and regulatory requests.
- Maintains a detailed item-level audit trail for compliance and reporting.

### Deployment and Administration

Deployment and administration of Archive2Anywhere is fast and easy; the product deploys in less than 30 minutes. Its rich graphical user interface allows users to quickly review the archived user reports and perform data extractions at a click of a button.

### High Performance Extraction and Conversion

Data extractions are extremely fast and only limited by the target repository. Archive2Anywhere is capable of running over 40 parallel mailbox extractions on a single server. Typically, Archive2Anywhere performs at a rate of 600 GBs per day for MSG to EML conversion based on an average message size of 200 KB.

### MSG to EML Conversion

One of the challenges of migrating legacy email archive data to Gmail is data format: Exchange messages must be converted from their native MSG format to the EML format required by Gmail in order to be migrated. Archive2Anywhere is the only email migration solution that supports conversion of native Exchange MSG data to EML.

### EDiscovery and Regulatory Compliance

Archive2Anywhere extracts and copies all data in a forensically sound and legally defensible manner. The proof is in our performance – in 2015 we processed and migrated email data for 2.2 million users totaling 80 billion messages with a 99.999% success rate.

### Consolidation of Exchange Shortcuts and Stubs

Email archiving solutions usually remove emails and attachments from Exchange to reduce mailbox size, leaving a pointer (called a stub or shortcut) behind pointing to the archive. Only Archive2Anywhere has the ability to remedy this very difficult situation. Archive2Anywhere queries the Exchange Server to determine the number of stubs in each user's mailbox and systematically matches message stubs in Exchange with archived messages in the archive.

### About Archive360

Archive360 is the leader in email archive migration software, successfully migrating more than 10 petabytes of data for more than 500 organizations worldwide since 2012. Archive2Anywhere™, the company's flagship product, is the only solution in the market purpose-built to deliver consistently fast, predictable migration rates, with verifiable data fidelity and defensible chain of custody reporting. A global organization, Archive360 delivers its solutions through a network of specialist partners.
