- Legal and eDiscovery compliance
- Safely decommission legacy archive

EML Migration Benefits

- Standard email format for Google Gmail
- Mobility for email migration
- Supports ingestion by leading 3<sup>rd</sup>-party archives
- Available with all editions of Archive2Anywhere™

Take advantage of EML Format Files for Archive Migration

Your organization is moving its messaging environment to the **Google Gmail** enterprise messaging platform and your archived mail has been stored in the native Microsoft Exchange email format, MSG. Migrating your legacy email archives to your new environment may require a conversion of your archived email from its current MSG format to EML, depending on the new target email archive. EML is the MIME RFC 822 standard email format used in the popular Google Gmail enterprise messaging platform. Your migration plan includes decommissioning your legacy email archive and converting your email into EML format for Google Gmail.

Introducing Archive2Anywhere™

**Archive2Anywhere™** is the premier email archive migration solution designed specifically to work with Microsoft Exchange and exports legacy archive content into standard EML files for transfer to 3<sup>rd</sup>-party email archives, such as Gmail and Google Vault. Archive2Anywhere converts Exchange MSG formatted email into EML formatted email with complete, original message fidelity.

- Conversion of native Exchange MSG data to EML file format with full RFC 821 and 822 compliance.
- A dynamic address resolution engine that converts Exchange Addresses to SMTP Addresses as part of the MSG-to-EML conversion.
- Supports custom X-Headers and real-time MSG, NSF to EML conversion.
- Maintains strict Source Message ID to EML Message ID chain of custody and reconciliation reporting with 99.99% accuracy.

## Deployment and Administration

Deployment and administration of Archive2Anywhere is fast and easy; the product deploys in less than 30 minutes. Its rich graphical user interface allows users to quickly review the archived user reports and perform data extractions at a click of a button.

## High Performance Extraction and Conversion

Data extractions are extremely fast and only limited by the target repository. Archive2Anywhere is capable of running over 40 parallel mailbox extractions on a single server. Typically, Archive2Anywhere performs at a rate of 600 GBs per day for MSG to EML conversion based on an average message size of 200 KB.

## EDiscovery and Regulatory Compliance

Archive2Anywhere extracts and copies all data in a forensically sound and legally defensible manner. The proof is in our performance – in 2015 we processed and migrated email data for 2.2 million users totaling 80 billion messages with a 99.999% success rate.

## Consolidation of Exchange Shortcuts and Stubs

Email archiving solutions usually remove emails and attachments from Exchange to reduce mailbox size, leaving a pointer (called a stub or shortcut) behind pointing to the archive. Only Archive2Anywhere has the ability to remedy this very difficult situation. Archive2Anywhere queries the Exchange Server to determine the number of stubs in each user's mailbox and systematically matches message stubs in Exchange with archived messages in the archive.

## About Archive360

Archive360 is the leader in email archive migration software, successfully migrating more than 10 petabytes of data for more than 500 organizations worldwide since 2012. Archive2Anywhere™, the company's flagship product, is the only solution in the market purpose-built to deliver consistently fast, predictable migration rates, with verifiable data fidelity and defensible chain of custody reporting. A global organization, Archive360 delivers its solutions through a network of specialist partners.
