- Commvault

Migration Options

Migrate directly to:

- Microsoft Exchange
- Microsoft Office 365
- Microsoft Azure
- Gmail with Google Vault
- Third party archive

Multi-stream Data Processing

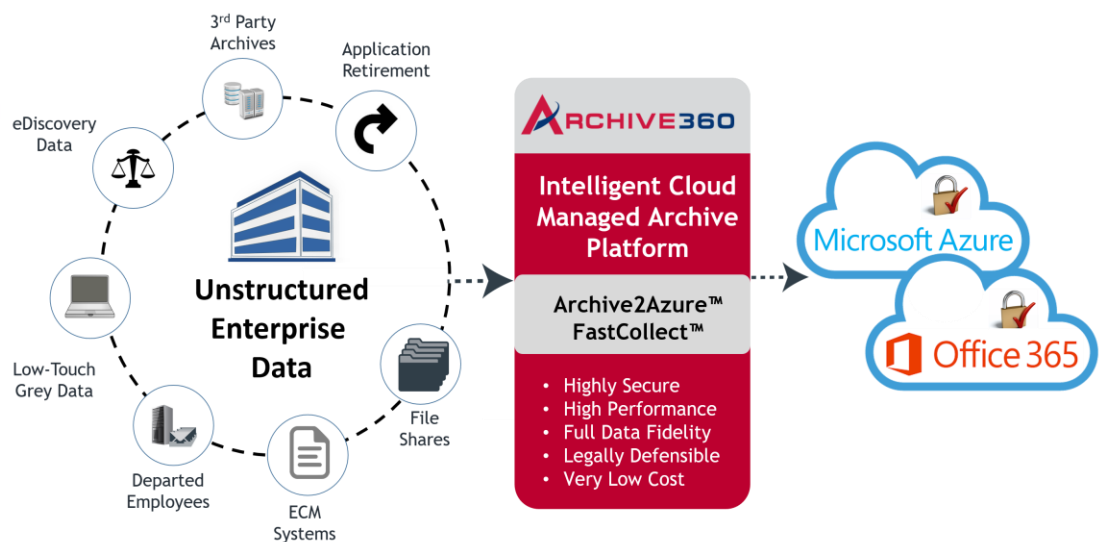

- **PST target**
7.2+ TB per day per server
- **Exchange On-Premise**
5.0+ TB per day per server
- **Office 365**
2.5+ TB per day per server
- **Gmail / Google Vault**
600 GB per day per server
(Google API throttle limit)

FastCollect for Email Archive Migration

FastCollect™ for Archives is the premier email archive migration solution designed specifically to work with all the leading email archiving solutions. FastCollect tightly integrates with the archive solution to ensure fast, forensically defensible email migration directly into Microsoft Exchange personal archives, Office 365, Gmail with Google Vault, other third party email archives, PST containers, and EML or MSG formats.

FastCollect uniquely operates at the object level and does NOT require the use of archive solution APIs. This avoids the problems associated with extraction APIs, which are known to be sluggish and inconsistent, and lack the defensible reconciliation reporting capability required in legal and regulatory situations. Utilizing FastCollect for your email archive migration assures the highest performance, most complete and legally defensible email archive migration available.

The FastCollect architecture is based on established Microsoft technologies and runs on standard virtual or physical servers. It is an application-intelligent solution providing deep integration with Exchange on-premise, Exchange Online and Office 365. FastCollect works with all the leading email archiving solutions and combines tight application integration, high performance and reporting in a single, easy to install solution.

Product Features and Benefits

Utilizes a multi-threaded, multi-server platform
Provides the highest performance and accuracy of all migration solutions.

Uses native Archive APIs
Enables search and filtering of emails by custodian, date range and other criteria.

Message level chain of custody reporting
Legally defensible reporting lowers eDiscovery risk and ensure strict SEC regulatory compliance.

Does not require indexing or data gathering before extraction

Begin message extraction within minutes of installation unlike other solutions that take days or weeks to index before start.

Intuitive and powerful graphical user interface

Less time needed for training – faster time to migration.

Message level compare by hash value

Meta data and messages hash values are compared before and after the migration to ensure complete message integrity.

System Requirements

<p>Application / Migration Server</p>	<ul style="list-style-type: none"> • Windows 2008 R2 Standard / Enterprise 64bit • CPU: 16 cores • RAM: 16 GB of RAM • Application HDD: 40 GB • Archive Disk Storage: Archive grade or better (SATA, SAN or NAS)
<p>Software Requirements</p>	<ul style="list-style-type: none"> • Microsoft Outlook 2007 / 2010 / 2013 32-bit • Microsoft .NET Framework 4.5 Click here • Disable User Account Control (UAC)
<p>Microsoft SQL Server</p>	<ul style="list-style-type: none"> • Microsoft SQL 2005 / 2008 Standard or Enterprise • CPU: 16 cores • RAM: 16 GB of RAM • Disk Storage: Medium performance grade (SATA or SAN)

About Archive360

Archive360 is the world’s leading provider of data migration and management solutions for the Microsoft cloud. Since 2012, Archive360 has securely migrated tens of petabytes into the Microsoft Cloud with record-breaking speed, verifiable data fidelity, and legally defensible chain of custody. Archive360’s FastCollect solution is the industry’s first compliance and unstructured data storage and management solution based on the Microsoft Azure platform. Archive360 is a global organization that delivers its solutions both directly and through a worldwide network of partners. Archive360 is a Microsoft Cloud Solution Provider and the Archive2Azure solution is Microsoft Azure Certified. To learn more, please visit: www.archive360.com.
